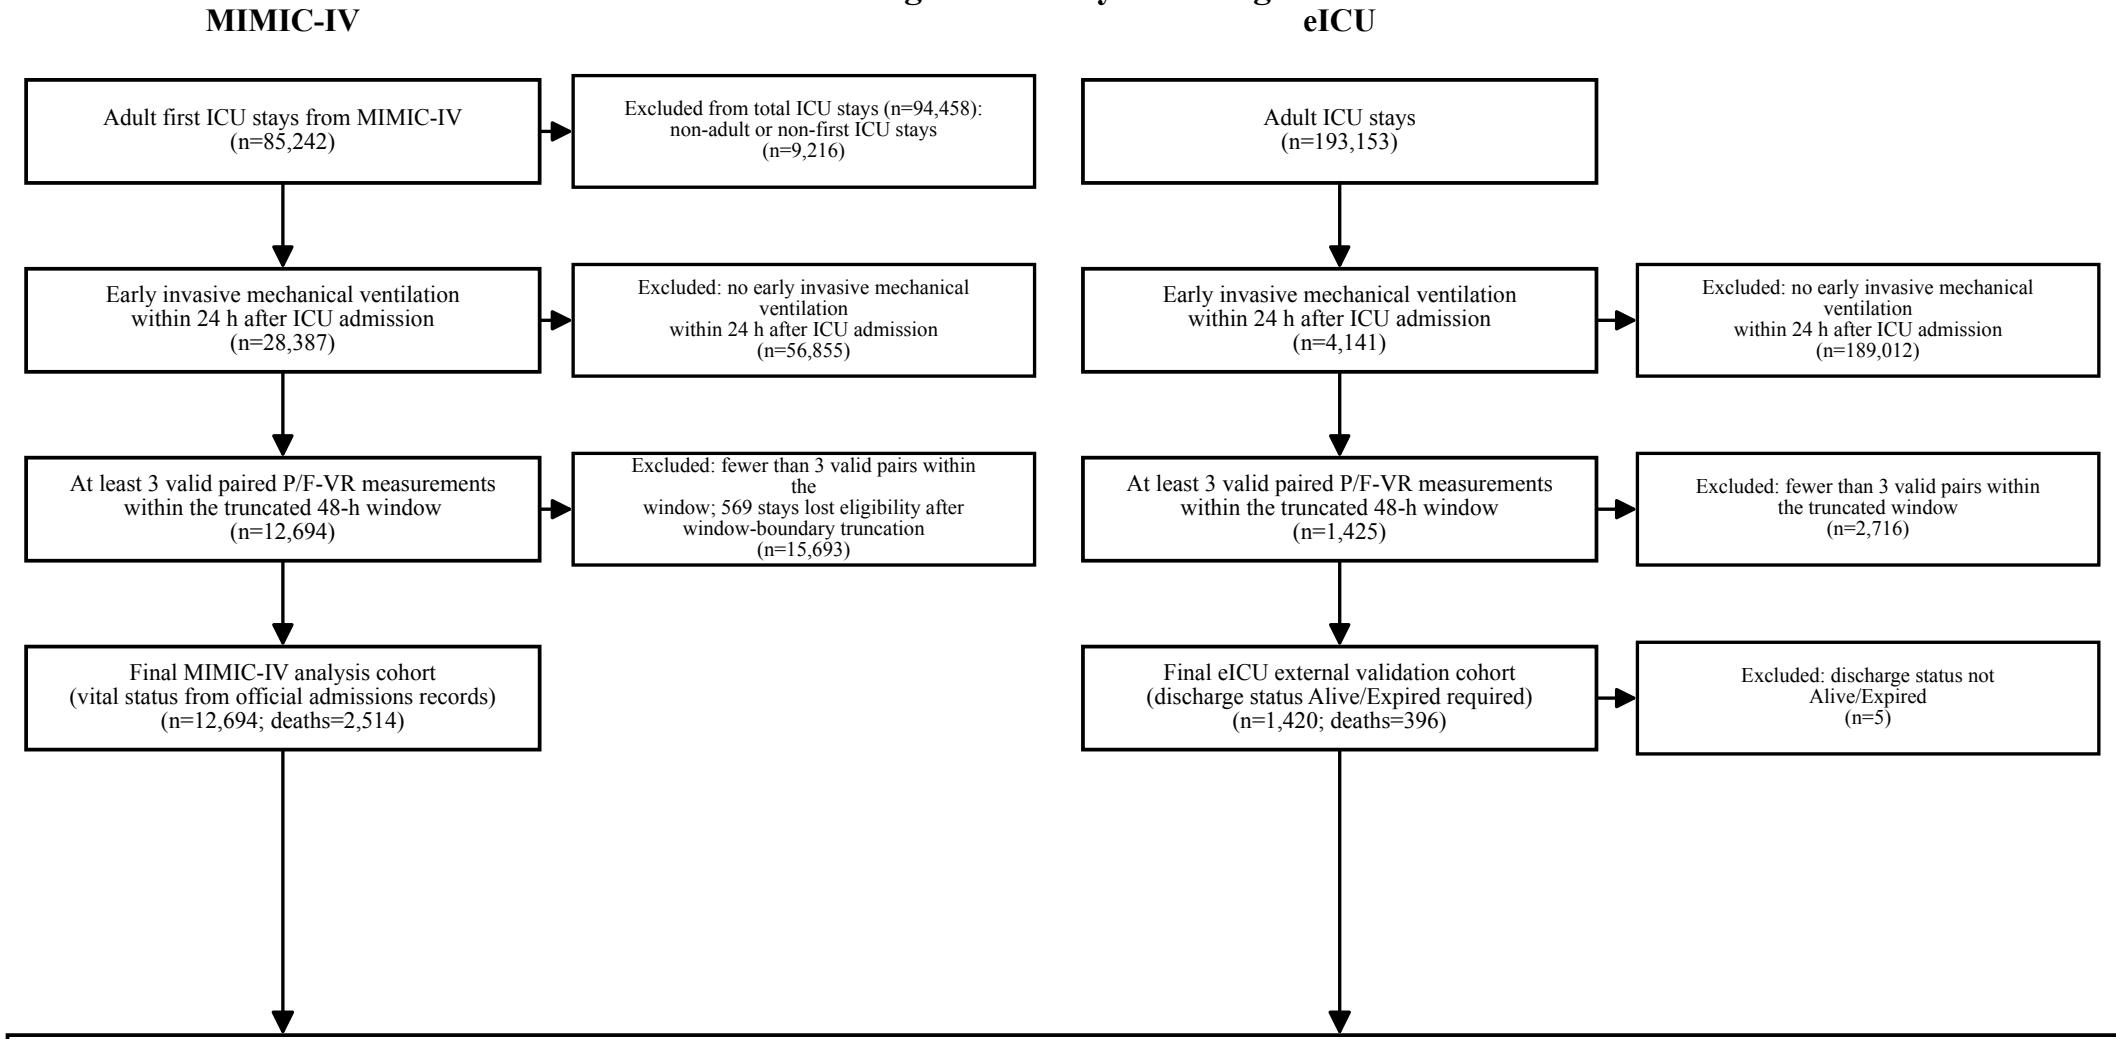

Figure 1. Study flow diagram.

```
Analysis sets
  MIMIC-IV  primary association cohort               n=12,694; deaths=2,514
            complete cases, fully adjusted            n=10,428; deaths=2,178  (excluded 2,266 for missing covariates)
            complete cases, harmonized               n=11,251; deaths=2,315  (excluded 1,443; fitted here, transported to eICU)
            48-h landmark prediction cohort           n=9,960; deaths after 48 h = 1,730
  eICU       primary association cohort (replication)  n=1,420; deaths=396
            transported-model evaluation set          n=1,206; deaths=269  (complete cases of the eICU landmark cohort)
