Analysis sets
 MIMIC-IV:  full analysis / MICE cohort                   n=12,694; deaths=2,514
            fully adjusted complete case                 n=10,428; deaths=2,178  (excluded 2,266, internal-model variables)
            harmonized complete case (fit for transport) n=11,251; deaths=2,315  (excluded 1,443, harmonized-model variables)
            48-h landmark prediction cohort              n=9,960; deaths after 48 h = 1,730
 eICU:      association cohort (full)                    n=1,420; deaths=396
            harmonized complete case / 48-h landmark     n=1,332 / 1,216; deaths=376 / 274
            landmark complete case (transported)         n=1,206; deaths=269
